

Multi-Discipline Engineering & Design

Idec Technical Services offers engineering and design services for instrumentation, electrical, HV protection and control systems.

Whether the Client's requirement is for a full engineering and design service or to supplement the client's own in-house team, Idec provide the answer using the latest technological aids to provide a competitive, accurate and efficient service.

Idec's original strength comes from our control and electrical background. Over the years this has been supplemented with the addition of PLC/SCADA, systems and HV protection capabilities.

Idec's design teams provide a comprehensive service from conceptual through front-end and detailed design to procurement, construction, commissioning and panel building using our in-house manufacturing facilities. Our design teams work alongside Idec's servicing and construction teams to provide a full and comprehensive turn key capability.

Services Provided:

- Project Management
- Instrumentation Design
- Electrical Design
- Systems Design (PLC, SCADA, DCS)
- HV Protection and Control System Design
- In-house or Client Based Engineering and Design Services
